# The Law Relating To Gas In Spraydusters Is Changing – Are You Ready?

The law surrounding use of gas in aerosols is changing and this means that after **31st December 2017**, we will no longer be able to supply spraydusters containing HFC 134a, the widely used non-flammable propellant.

Following the legislative changes, there will be **'TWO OPTIONS'** available...

**1** Continue to purchase your current AF branded product via the same order code.

The product formulation is changing to produce a non-flammable, environmentally friendly, fully compliant sprayduster. The new spraydusters will utilise higher priced materials and will therefore attract a higher price point than the current HFC 134a versions.

Codes:

SDU125D	SDU100
SDU200D	SPDI200
SDU400D	SPD300

**2** Choose the revolutionary non-flammable Sprayduster Zero (containing active carbon).

This product is invertible, has three different 'blast' strengths and a global warming potential of just 1. Sprayduster Zero is an environmentally friendly option and fully compliant with the new legislation.

Code:  
SDZ420D

\*Flammable spraydusters (containing butane or propane are unaffected by the changing F-Gas legislation. For more information about the changing legislation, please visit [www.af-net.com](http://www.af-net.com)
